## General Description

The G3601 is a single inverter gate with high speed. It's designed for 1.65V to 5.5V V<sub>cc</sub> operation, and low power consumption. The G3601 performs the Boolean function Y =  $\bar{A}$ . This device is fully specified for partial-power-down applications using I<sub>off</sub>. The I<sub>off</sub> circuitry disables the output, preventing damaging current backflow through the device when it is power down.

The G3601 is available in the WLCSP2X2-4 package.
