General Description

The G3603 is a single or gate with high speed. It's designed for 1.65V to 5.5V V_{cc} operation, and low power consumption. The G3603 performs the Boolean function Y=A+B. This device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the output, preventing damaging current backflow through the device when it is power down.

The G3601 is available in the WLCSP2X3-5 package.
